Economy fields and networks in development tourism of the field place incomparable and present in the day all countries tourism to the development of the country tourists flow more trying to redirect one in the circumstances to the field attraction being carried out investments country economy for extremely important known to be is happening Tourism to the field investments active attraction make , their efficient to be directed provision of the country tourism potential increase in our country tourism of the field touristic attractiveness to investors nice to do current from issues one is counted.	

Introduction:

The word " Investment ". Latin derived from language (lat. investio – to wrap). into " fund mobile do", "capital input said meanings means _ Investment in the future benefit get in order to any field or to the network long for a period of time investment is understood. Investment present in the day countries economy development main factor being left let's say not mistaken we will be Developing and transition in the economy countries for investments very necessary is counted.

The first impressions of the investment home the first appearances of the farm appear has been in periods manifestation was _ His initial appearance dangerous has been long term and long to distances go exchange later on trade to do for separated. Later on the sea through trade works done from being increased after kings and rich people by to sailors new products and new to find lands investments sewn _ However such money bet not called an investment.

Literature Review

Investment content essence about many to look and tariffs , scientists thoughts available _ Our country scientists by many _ views and tariffs telling passed . A. Vahabov, Sh. Khajibakiyev, N. Muminov, D. Gozibekov, G. Makhmudovalar by of investments economic content and essence on the surface research take went , A. Vahabov , Sh. Khajibakiyev , N. Muminovlar by of investments content essence according to as follows tariff given : "« investments - profit get and positive social to the effect reach in order to entrepreneurship objects and another activity types to be placed money funds of banks purposeful deposits , shares , other valuable papers , technologies , machines , equipment , licenses , loans , any other property _ or proprietary rights , intellectual riches ".[1]

Research Methodology

In research information collection, analysis to do and methods used. Data analysis and synthesis do, scientific abstraction, economic and mathematician modeling methods used without theoretical descriptions work developed.

Analysis and Results

Investments placed investment to the object according to , investing to the period according to , investment being done property to the shape according to and territorial to the sign according to one how much to the group separated. Such to groups from separation the goal investment about enough and necessary information to get chance is to give them below counting let's go:

Investment directed to the object according to:

- Real investments
- Financial investments

Investment to the period according to

- Long term
- Short term

Ownership to the shape according to:

- Private investments
- Foreign investments
- State investments
- A mix investments

Territorial to the sign according to:

- External investments
- Internal investments

We listed above past all investments one on purpose benefit get for directed will be

Conclusions and offers:

Investments usually the investment for the investor as well attraction doing towards also useful for is counted. This is the reason own from himself known by the investor empty standing funds work release or financial to investment attraction reach through benefit get if second from the side investment attraction doing from the side any one the field development progressive carry on and work release expand and deversification to do for is spent. Work known in the output to the point when it arrives him expand or how many the product types to add right will come So situations enterprise and organizations the first in turn own from funds , not distributed from profit and fund funds use possible _ We are above counting past factors work release to expand internal factors is counted . Work release expand and development external bank loans to factors, other enterprise and from the states debts and investments enters _

[1] Vahabov AV, Khajibakiyev Sh. Kh., Muminov NG, Khorizhiy investments . Study manual . T.: " Finance ".

Any one work release of the enterprise investment through developed development to find country in the church of enterprises in this field development and do it from behind whole one of the sector development means.

Investment currents usually developed from countries evolving (transition economy) to countries and developing of times economic backward to periods directed will be This is as follows explain possible will be So developed countries Christianity quite a bit developed and them competition environment free and strength therefore of the enterprise income immutable being enterprise income finite to the cost equal to will be (MR=MC). Such in case enterprise more income get in order to the price a little increases of the enterprise buyers competitor of the enterprise from products buy take starts _ Enterprise all from consumers separated stay can _ The price shooting is not effective enough count the product cost finite to the cost equality therefore enterprise that's the way can't hold These in consideration take developing countries in the economy relatively not so much not developed competition in the environment activity walking income get there is a lot of opportunity tall _ That's why investment developed of times developing to the states oriented will be Such to investments developing in the state organize being carried out abroad enterprises , alliance enterprises , joint enterprises and work release size and the product type expanded enterprises example be takes _

Investments developing from the states backward to countries to move backward in countries natural resources diversity and stock, cheap worker power example be takes _ Backward countries the most a lot raw material export doer countries is counted. This is the reason their capital resources (machine technique technology with less lack of insurance and worker power in the market competent abilities of weight very lack of That's why such countries raw items export to do through economy moderate holding tries to stand up. That's why for the same to the states investment by entering cheap worker power and raw from the material using work release to the road to put possible and this the most good income to get one is counted.

Current in the day developed from countries backward to countries investment input and in the country work release organize to do Demand is high increased is going of this situation two side available in our eyes. Firstly developing country entering of investment weight high that's it because of backward country of the economy to growth take will come Second from the side such backward to the country being introduced investment that's it of the country developed to the country dependence cause releases _ That's why backward and transition in the church countries developed from countries investments attraction while doing possibility until less acceptance to do attention looks _ Such dependency especially long term in investments to the eye obvious thrown away

Summary in place to say it's okay investments Christianity in development main from the factors one is counted. That's why all countries abroad investments own economies more attraction tries to do. With that together being introduced of investments quantity from behind increased if he leaves such condition investment attraction doing state economy for dangerous considered economic dependence cause release possible will be.
