ABSTRACT	KEY WORDS
This article discusses the importance of effective use of the resource in the development of the sectors of the economy. There are ways to determine the classification of the resource, production premium, labor productivity and capital premium.	Economy, service, resource, labor productivity, premium cost.

Introduction

One of the important sectors of the service sector of the economy is his role in this field are constantly growing the number of employees is also increasing. This trend belongs to the world economy and uzbekistan in particular. In such conditions the rational use of the resources of the enterprises at the topical issues of the quality of services remain moqda.

To solve this problem of resources that are available in the enterprise management process is needed to improve. Any management construction management object classification and analysis of the organizational structure is based on. In such a case, the enterprise is subject to management is that set of resources is

The concept of resources, as resources need to identify situations that can be of object management. Resources (like the band. resource — auxiliary means means means) - money funds, raw materials, natural, economic, labor, currency, and may be others. In a broad sense — in the life of society means ensuring the production of the express, which means it is

"Economic resources used in this economic activity means, including natural resources, labor and capital is Financial capital resources and money, it also is regarded as the economic resources". [1]

The general classification of resources has adopted emas. Economic activity that is used in the classification of the type of resources are:

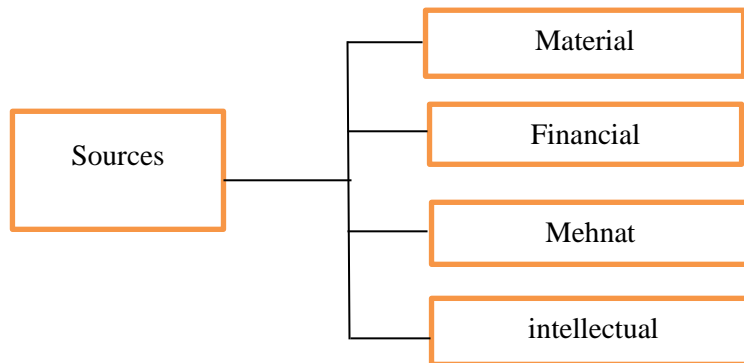

- Natural;
- The means of production;
- Labor relations;
- Information;
- Financial;

Foreign (currency reserves, foreign trade relations of the network). [2]

In our opinion, the activities of the enterprises of the service sector at resources are the following:

- material;
- financial;
- employees (labor);
- intangible (intellectual ideas).

In this context resources general classification 1-in the picture. This classification of any economic resources facilities, including the university can be used for. Accounting and the use of resources that are responsible for the classification of the range of services offered confirms.

1-graph. General classification of resources

Every issue always increase the effectiveness of economic production andthe fbng a pressing problem, as was its focus. The reason for this is that the country is facing important without the production efficiency of the issues the task will not be accomplished independent of speeding up economic development.

The main purpose of production in a market economy economic reason to get at a profit for each sub'strives to bring a welcome addition to the benefits of more. Therefore, the production efficiency in determining the benefits of taken (F) the costs of resources to the production of spent (x) is determined by the ratio, that is:

$$R' = \frac{F}{X} \times 100\%.$$

Here: R' - norms of the benefits of X – is the cost of economic resources.

The versatile effectiveness of the production of the issue is, it participated in the full expression of the productivity of the factors, which indicate the level of effective use of them from the indicator system are used.

Labor productivity is one of them. This power unit of labor productivity during the working time of the product produced and the ability to create the product, it is said (consumption value) is determined by the proportion to the amount of labor spent. You MUCH labor productivity, the product with m , while the time spent on work - V with the character, considering labor productivity is determined as follows:

$$MU = M/V.$$

In exchange for each unit of labor spent on labor productivity on that man live, at the expense of the product produced is determined by the amount of man-hours.

Participated in determining capital productivity capital productivity in the production of each unit of the product obtained in exchange for income or profit is determined. Capital productivity, you 're in the production participated in the amount of capital K , the product - M , gross income - Y adi with benefits - defined f is formed by considering the following formula:

$$IT'S = M/K; \quad S = YADI/K; \quad S = F/K.$$

By the efficient use of limited economic resources and production capacity needs to increase the level of the ministry of economy and solve the necessary problems before the following problems will arise.

1. Acceptable production and servicing of the options (the most necessary and cost-effective types) selection and to attract more resources to develop.
2. Each unit of available resources save-tergab effective use.
3. Scientific-technical achievements and the introduction of new technologies, new energy, raw material types, their finding sources to attract use of resources, achieve an increase in productivity. To solve these problems, the need effective use of resourcesto means. The effective organization of the activities of the enterprise means.
