<b>ABSTRACT</b>	<b>KEY WORDS</b>
<p>This article highlights key directions for enhancing the tourism potential of the Republic of Uzbekistan, including the efficient use of cultural heritage sites, the development of ecotourism, and the improvement of tourism services through innovative approaches. The study analyzes existing challenges and proposes recommendations to address them in support of sustainable tourism growth.</p>	<p>National tourism; cultural heritage; ecotourism; innovative projects; Uzbekistan; tourism infrastructure.</p>

**Introduction**

In recent years, Uzbekistan has given special attention to tourism as an important sphere of economic and social life. Tourism not only shapes a positive international image of the country, but also has strong potential to diversify the economy, create jobs, support regional development, strengthen the private sector, and attract foreign investment. Historical cities such as Samarkand, Bukhara, Khiva, Shahrisabz, and Termez have left a significant legacy in world civilization. Many monuments in these cities are included in UNESCO's World Heritage List, which helps position Uzbekistan on the global tourism map. At the same time, mountain and forest areas, desert and steppe landscapes, nature reserves, and national parks create broad opportunities for ecotourism.

Further development of tourism today is closely linked to innovation, digital transformation, and technological advancement. Infrastructure that meets modern traveler expectations, digital services, sustainability-oriented offerings, and attractive cultural-educational content are decisive factors in this direction. Accordingly, this article provides an in-depth analysis of how the efficient use of cultural heritage, the promotion of ecotourism, and the implementation of innovative projects can strengthen national tourism potential in Uzbekistan.

A wide range of scientific, practical, and regulatory sources support tourism development in Uzbekistan and play an important role in shaping and improving national tourism policy. Key references include recommendations from international organizations, state strategies, scholarly articles, monographs, and expert analyses. Publications by the World Tourism Organization (UNWTO), such as Tourism and Cultural Heritage and ecotourism guidelines, describe global trends, sustainability criteria, and strategic approaches relevant to cultural and ecological tourism. In the

national context, the Presidential Decree PF-5611 and the 2022-2026 Development Strategy identify tourism as a priority area of state policy.

At the academic level, works by leading Uzbek scholars such as A. Karimov, N. Rasulov, M. Eshquvvatov, and G. Tursunova present theoretical and practical foundations. For example: (1) Karimov analyzes the engagement of cultural heritage sites in tourism and the state of infrastructure; (2) Rasulov focuses on ecological sustainability, natural-resource use, and local community participation; (3) Eshquvvatov examines innovative technologies, including digital platforms and the integration of the “smart tourism” concept into national tourism.

In addition, statistical bulletins and strategic documents published by the Ministry of Tourism and Cultural Heritage and the Ministry of Economy and Finance serve as important analytical sources, providing empirical information on growth rates, visitor numbers, service quality, and infrastructure development. International experience from countries such as Turkey, Georgia, Vietnam, and Spain is also referenced, including the adoption of AR/VR, ecological routes, interactive guides, and international marketing strategies, which may be adapted to Uzbekistan.

## **Methodology**

Given that tourism is a multi-sector and complex system, the study applied a combination of traditional socio-economic analysis and modern analytical tools, including: (1) System analysis of official decrees, government decisions, ministry statistics, and strategic documents; (2) Comparative analysis of Uzbekistan and selected countries (e.g., Turkey, Spain, Georgia, Kazakhstan) regarding heritage management, ecotourism development, and innovation adoption; (3) Empirical observation and case studies of selected destinations (e.g., cultural sites in Samarkand and Bukhara, Zaamin National Park, the Chorvoq recreation area, and interactive museums in Tashkent); (4) Content analysis of media, academic journals, and official information portals; and (5) Informal expert discussions with guides, local entrepreneurs, and tourism officials.

## **Findings and Discussion**

Uzbekistan’s strong tourism potential is rooted in its unique cultural heritage, rich history, and diverse natural landscapes. Cultural, ecological, and innovation-based tourism are increasingly viewed as strategic priorities for improving competitiveness.

**Cultural heritage:** Architectural monuments in cities such as Samarkand, Bukhara, and Khiva - including the Registan ensemble, the Ark Fortress, and Ichan-Qala - attract large numbers of visitors each year. However, the full tourism value of these sites has not yet been realized. Limited use of information technologies, a lack of interactive services, and insufficient visitor convenience, especially for international tourists, constrain growth. Introducing digital guides, QR-coded information stands, 3D reconstructions, and AR-based excursions can increase attractiveness while supporting conservation.

**Ecotourism:** Mountain, desert, and forest regions provide major opportunities. Projects are being implemented in areas such as the Ugom-Chatkal range, Zaamin National Park, the Kyzylkum desert, and the Aydar-Arnasay lake system. Ecotourism can support environmental protection, sustainable employment for local residents, and preservation of local culture. Nevertheless, challenges persist, including weak infrastructure, inconvenient transport and logistics, low service culture, and insufficient application of environmental-safety standards.

**Innovation:** In recent years, several digital initiatives have been introduced. Examples include a national tourism mobile application (UZTOURISM), platforms for virtual excursions in 3D, digital maps and navigation tools, and early implementations of the smart tourism concept in selected cities. Startup initiatives are also generating technology-based solutions such as online booking systems, AR excursions, and local guide applications. These innovations enrich visitor experience and support the global promotion of Uzbekistan's tourism offerings.

## Conclusion

Unlocking and sustainably developing Uzbekistan's tourism potential is a strategic priority. The analysis suggests that combining cultural heritage, ecological resources, and modern technologies can drive tourism to a new stage. Digitizing heritage sites and creating interactive, multilingual information resources will enhance attractiveness while strengthening preservation. For ecotourism, defining ecological zones, managing them under environmental-protection principles, and engaging local communities can improve socio-economic sustainability. In addition, adopting innovative technologies such as AI, AR/VR, and IoT can improve service quality, personalize routes, and automate management processes. Finally, attracting foreign investment and developing effective marketing strategies on digital platforms will help Uzbekistan strengthen its position in the global tourism market.
