

IMPROVING THE MECHANISMS FOR ENHANCING THE EFFICIENCY OF INTEGRATION BETWEEN THE ENTREPRENEURIAL ENVIRONMENT AND POPULATION WELFARE

Gulshanoy Lutfullayeva
Master's Student in Economics
Turon University, Andijan Branch

ABSTRACT	KEYWORDS
This article analyzes the interrelationship between the entrepreneurial environment and population welfare, as well as mechanisms for improving the efficiency of their integration. Within the framework of the study, the ways of increasing population income, ensuring employment, and achieving socio-economic stability through the development of entrepreneurship are examined. Furthermore, scientifically grounded proposals for improving this process have been developed.	Entrepreneurial environment, population welfare, integration, efficiency, mechanism, employment, income.

Introduction

TADBIRKORLIK MUHITI VA AHOLI FAROVONLIGI O'RTASIDAGI INTEGRATSIYA SAMARADORLIGINI OSHIRISH MEXANIZMLARINI TAKOMILLASHTIRISH

Аннотация:

В данной статье проанализирована взаимосвязь между предпринимательской средой и благосостоянием населения, а также механизмы повышения эффективности их интеграции. В рамках исследования изучены пути повышения доходов населения, обеспечения занятости и достижения социально-экономической стабильности посредством развития предпринимательства. Кроме того, разработаны научно обоснованные предложения по совершенствованию данного процесса.

Ключевые слова: предпринимательская среда, благосостояние населения, интеграция, эффективность, механизм, занятость, доход.

Introduction

Modern in the economy and business environment development population welfare improving of the most important factors one as it is regarded. Market economy in conditions exactly entrepreneurial activity and economic growth, the main driver will be the service will, new work places to create and of the population of income sources expands. In this regard, entrepreneurship support and its effective business be doing to relaxed environment to create the state economic policy of the priority directions of one is.

The Uzbekistan republic in recent years, entrepreneurial activity development, the private sector, the share increase and population wellbeing of enhancing aimed at wide - ranging reforms made are being. In particular, Uzbekistan Republic president of the business activities, financial support expansion of the purpose of a from 2025-26 years-up in December-176-dated Decree within the framework **2026-2027** years, "Business development company" joint-stock company by 4 trln soums for financial support support measures to provide to the through 5 thousand business projects implementation to increase has been identified¹. This decree, on the basis of small business and private entrepreneurship development, entrepreneurs of production production and service provision to the project the bank by 10 billion soums to the credit allocation for resources, placing; small business work in the production of, service show and "green economy" towards the direction microprojects 500 million in total loans, the following terms are re - funding: allocated loan, the interest rate is 6 percent, however, the Central bank key rate from 4 percent point high rate decrease; fu 1-year business I am doing, and 2 students in the professional's and 5 than and more than more new working places, which will create the project provided was.

Also, the Uzbekistan Republic President 2024-23 year-in December, UP-143-dated Decree within the framework of the "Poverty reduction and of the population living in the wellbeing of increase in regard

¹ Decree of the President of the Republic of Uzbekistan No. UP-176 dated September 26, 2025, "On measures to support business entities based on new approaches." <https://lex.uz/ru/docs/-7746045>

of measures new level to take out on”² tasks has been identified. This decree, on the basis of the territory of the population living conditions improvement, business development, poverty reduction and social support programs effectiveness in achieving new approach and accumulated national experience to support measures to further higher level to get to the main goals of the one, as noted, was.

Globalization process, economic resources were limited, and the competitive environment, the severity of the conditions in the business environment and the population’s wellbeing between the interaction depends on enhancing deep learning particular importance professional is. Population welfare increase not only economic growth with is not, but this is the growth of the population in the layers between a fair distribution with also is associated. This view of point, entrepreneurial activity through created economic opportunities for the population of wide layers to delivery, i.e. their integration to ensure actual scientific-practical issue is.

Research Methodology

This research business environment and population wellbeing between the integration of the effectiveness of increasing the mechanisms of study in order to complex approach is applied. Research in the process of Uzbekistan republic of the statistics information main information source as was used. Research empirical analysis method on the basis of business entities of the number, employment level and the population income between mutual correlation statistical data on basis was studied and their dynamics analysis was. Also, the analysis in the process of induktiv the method through specific statistical data on the basis of general conclusions has formed.

Literature Review

Business environment and population wellbeing between the mutual relation of economic theory is widely studied important priorities of the one is. This issue the get go the scientific research that shows, entrepreneurial activity and economic growth to ensure, employment level increase and the population living level in improving significant a factor as show up will. Foreign scientists of entrepreneurship in economic development place different approaches on the basis of comments considered fantasy.

For example, foreign economists, scientists from Pete Drucker’s opinion in entrepreneurship, innovation and opportunities for effective use of the process as interpret to, of the economic efficiency of increasing an important factor as it shows. His research look at business activities through society of new value creation and the population of the income increase particular is noted³.

Also, Amartya The population wellbeing of assessing only the income indicators with limited did not remain, of man and of the possibilities and life quality, such as factors are also involved to get the need many have given⁴. This approach to entrepreneurial activity of the population and the prosperity of complex effects in assessing important methodological basis be serve will.

CIS countries scientists by also business activities and population wellbeing between relation on the issues of extensive research is. In particular, the Russian economist Alexei Aganbegyan own scientific work in small business and private entrepreneurship, economic growth and population employment of ensuring an important factor as it assesses⁵. It’s business activity is the development of regional

economic interaction, the active increase and the population ‘s real income positive effects to show the point was noted.

Economists, scientists G. Qosimova’s opinion that “Social policy - that of the population living in the wellbeing of to increase his dwelling and performance for sufficient conditions which provide state of the policy the main directions of one”⁶ that it was noted

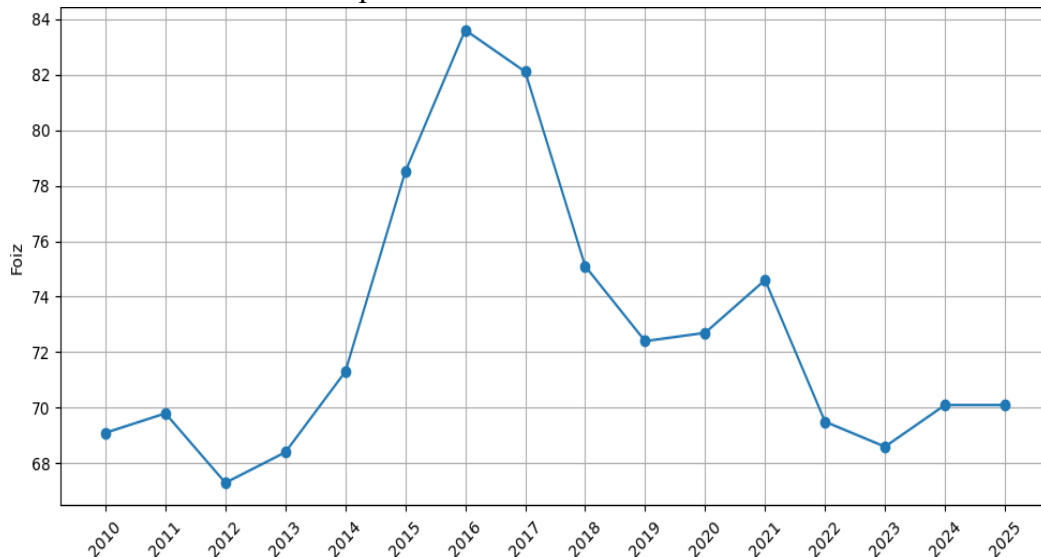

That is in addition to, in the republic out who go to scientific research in small business and private entrepreneurship gross domestic product share, employment, mainly in provision of the role and poverty reduction holding meetings the importance of a wide range of lit. Local scientists the research of entrepreneurship development through of the population living level to increase, social and economic stability, consolidation and regional variations of the decrease may have noted that.

This with along, available national studies analysis that shows, business environment and population wellbeing between the integration of the effectiveness increase of the mechanisms complex approach on the basis of improvement of issues sufficient level deep studied. Especially, regional characteristics into account taking without this integration effectiveness increasing on scientific-practical recommendations work out of a need there is.

Analysis and results

In the country in recent years, the business environment, improving aimed at wide - ranging reforms as a result of small business and private entrepreneurship in the economy, the share increased has. This, while the population of employment provide, income increase and living the wellbeing of improving an important factor is that the service is.

Statistical data according, in Uzbekistan small business and private entrepreneurship gross domestic product, the share of high if it is economic growth important sources one is. This sector by being created a new work of the place of the population and employment to increase served has. This with along, business entities of the number of the increase in the internal market expansion, services, volume increase and real income increase the positive effect shows.

2023	68,6	22,2	94,5	80,7
2024	70,1	became 32.1	92,8	81,3
2025 of the year from January-December	70,1	38,0	92,5	x

Andijan region small business and private entrepreneurship subjects of the economy, the share of the regions sustainable economic development is an important factor, as demonstrated has been. 2010-2025-yearson the range of statistical data analysis this sector is not only a gross regional product of the complexity of creation, but also on industry, construction and population employment provision is mainly in place high that it shows.

First of all, gross regional product (GRP) in the structure of small business to share attention paid to who we are, in 2010 this figure to 69.1 percent up was if, in 2016 83,6% to raised. This while a short period in 14,5 percent, to handle, to grow means. This condition in the territory of small business entities in the number of increase, family business, service provision, and re-work the activities of the expansion by is caused. Next year, as certain extent reduced, although, from the year 2025 to the end of according 70,1 percent at the level of preserved remains. This small business Andijan region’s economy leading the work of the legislative power to remain demonstrates that it is given.

Andijan region small business and private entrepreneurship in the economy and the weight from year to year, a high level of preserved remains. In particular, in 2010 the gross regional product in its share to 69.1 percent up was if, in 2016 this indicator 83,6 percent have reached. From the year 2025 to the results according to this indicator 70,1 percent up continues.

Construction in the field of small business share the whole period during a 90 percent high if, by 2025, from 92,5 percent up reached.

Industrial network while in 2010 15,5 percent share from 2025 to come 38,0 percent reached, 2,4 times increased⁹.

⁹Statistics Committee of Andijan region. <https://www.andstat.uz/>

Employment in the small business contribution of 80 percent high if it is, this area of new work places of creation and of the population with income increasing this sector important role that plays confirms. The analysis of the results of Andijan region small business and private entrepreneurship in economic system in place, the year-to-year consolidation that go to shows. Especially, construction and employment in the sphere of an absolute advantage, in the industry, while the gradual deepening of increased participation is observed. This trend is in the territory of the business environment improve, the state by created benefits and private property to support the policy of practical result.

Summary

The research results of that analysis, business environment and population welfare between direct and logical link is there. Entrepreneurial activity and the development of new work places creation, population, employment increase, real income increase and living the wellbeing of to improve your serve will. This aspect, business environment, development of the country's economic growth important factors one is.

Analysis as a result of determine, in the country of entrepreneurship development aimed at reforms as a result of small business and private entrepreneurship gross domestic product, employment of the population in income share increased has. This, while business environment and population wellbeing between integration effective increased that go shows.

This with along, the research for this integration, the effectiveness of limiting a number of problems will identify. In particular, the territory of new business development to the level of rough, financial resources, access to the time limit, the infrastructure enough is not ministry, innovation, entrepreneurship stagnant development competence and qualified personnel lack of the main problems, as noted, were.

The article within the analysis come out, the following scientific-practical suggestions for working out:

- business entities with financial support mechanisms for expansion;
- business doing for institutional and legal environment, further improvement;
- regional business infrastructure development;
- innovation, entrepreneurship and startup projects support;
- the population of entrepreneurial skills enhancing aimed at education of the program expansion.

Conclusion I say, business environment and population wellbeing between integration effectiveness to increase the mechanisms of improvement in the country's economic growth and accelerate, population, employment, provide, income increase, and social and economic stability in strengthening an important role earned is.
