ABSTRACT	KEYWORDS
This article considers the importance of preparing future teachers for their educational activities, taking into account social and cultural changes in society. The main idea of the synergistic approach is to effectively organize the pedagogical process by corporately combining the individual characteristics of the teacher and his influence on students.	Synergistic approach, corporate training, teachers, students, learning process, principle, communication.

INTRODUCTION

Preparing future teachers for teaching is an important part of the educational process, which requires a comprehensive and systematic approach. A synergistic approach based on the principles of interaction and interdependence of various elements of the education system helps to form highly developed professional and personal qualities in teachers. The synergistic approach in education considers pedagogical activity as a system of interrelated and interacting elements. This approach is aimed at creating a harmonious interaction between teachers, students, the educational process and external factors. The main idea is to create an educational environment that stimulates creativity and self-development among teachers and students. Corporate training of future teachers involves the development and implementation of programs aimed at developing not only professional, but also communicative, leadership and organizational skills. Corporate educational technologies are aimed at creating interacting teams that develop joint responsibility for the result, encourage the exchange of experience and innovative approaches to educational activities. Implementation of group and team work forms aimed at developing teamwork between students and teachers. This can be both within the framework of educational projects and at the level of everyday educational activities. Combining theoretical and practical experience: using synergistic technologies to combine theoretical knowledge and practical skills, for example, pedagogical trainings, master classes, business games. Interdisciplinary projects: developing interdisciplinary projects that bring together students from different specialties and areas. This allows you to broaden your knowledge horizons and helps develop critical thinking and creativity. Mentoring and coaching: introducing a system of mentors in which more experienced teachers help novices adapt to the profession and develop by transferring practical knowledge and experience. The synergistic approach is a way of understanding and managing the pedagogical process, taking into account the theory of systems and their interdependence. It ensures the interaction of complex systems, the flexibility of the system in changing conditions. Through this

approach, the educational activities of teachers can be more effective. Corporate training is the provision of cooperation between the pedagogical team and its members and the organization of this process in a methodical and systematic manner. These technologies help to develop teachers' communication skills, strengthen teamwork, and create the necessary conditions for personal growth. Corporate implementation of educational activities helps to improve the pedagogical and social skills of the teacher. Teachers are trained to effectively manage their educational activities by working together, helping each other, and exchanging experiences. In this process, it is necessary to teach methodologies aimed at developing skills that will help students find their place in society. A synergistic approach is important in the development of teachers' educational activities. This approach is aimed at providing teachers not only with pedagogical knowledge, but also with their personal and professional development. The main principles of the synergistic approach:

Unifying teachers in educational activities and integrating their knowledge. This strengthens cooperation between teachers and allows for the exchange of experience. Developing programs aimed at self-development of teachers. This helps to increase their personal and professional skills. Providing teachers with the opportunity to use modern pedagogical technologies and innovative approaches. This helps to make their educational activities more effective. Implementing a systematic approach in the process of teacher training. This allows us to view the educational activities of teachers as a whole. Taking into account the personal abilities and needs of each teacher. This helps teachers to be more successful in their educational activities. Corporate training based on a synergistic approach plays an important role in the development of teachers' educational activities. This will not only improve the professional skills of teachers, but also have a positive impact on their personal development. As a result, teachers will be more effective in the educational process and will be able to provide quality education to students.

Advantages of the synergistic approach:

- Increased personal growth and pedagogical skills of teachers;
- Development of teachers' ability to adapt to social and cultural changes;
- Inclusion of more individual and collective approaches in educational activities;
- Increased pedagogical effectiveness of corporate training of teachers for educational activities.

Conclusion:

Technologies for corporate training of future teachers for educational activities based on a synergistic approach increase the effectiveness of the educational process. These technologies develop teachers' social skills, help to harmonize individual and collective activities, and pave the way for effective management of the pedagogical process. This greatly contributes to the personal and professional growth of teachers.
