A B S T R A C T	KEY WORDS
In our society today, the teaching of foreign languages, especially English, is developing day by day. The mechanism of teaching methods plays an important role in the process of teaching English. The use of effective method competencies in the classroom is valued as a product of the intellectual approach and research of each faculty member to their profession. The functional serenity of modern pedtechnologies improves the process of integrated communication in the process of language teaching.	modern ped-technologies, functional process, intellectual aspect, professional efficiency, methods, ways, approaches

INTRODUCTION

Today, teaching and learning a foreign language (English) is modern use of pedagogical technologies is consistent in all educational institutions and It is continuously developing and widely used is being done. As a result, there are more training rooms in all educational institutions diversity and creating rich opportunities for pupils and students It opens wide opportunities for effective teaching and learning. The whole world It is important because the number of people learning English is increasing day by day resource centers exist in all educational institutions

necessary reference materials for learners based on modern methods The covered resource requires formatting. Undoubtedly, in the scientific organization of the lesson it is important, and in addition, it is time to create an immovable strategic foundation template is a requirement, which in turn is divided into several principles and methods. From this

the goal is to focus on increasing the effectiveness of the lesson. Modern training in the laboratory with the participation of students by professors the educational process conducted on the basis of educational methods is based on two partnerships

is a source of cooperation and brings about the expected result in the final part and output determines the creativity skills of this teacher. To training A relatively different approach not only enhances thinking capacity, but also the student's field-related skills (speaking, writing, reading, listening) are sharp aimed at development. "Interactive methods are integrated with skills connection is interpreted as an interesting and complementary lesson. It is undoubtedly the responsibility of pedagogues - teachers to ensure its integrity requires a responsible and skillful approach to the task"

DISCUSSION

In today's modern era, a creative approach to class activities, we will see with teaching. Knowledge, abilities, skills of professors the principle of approach in each lesson or the effectiveness of the chosen method at the end of the training and during the lesson of the students determined on the basis of the achieved indicator. So, it can be seen from this not limited to the use and implementation of modern pedagogical technologies but also the method, used method, principles in increasing the effectiveness of education to clearly indicate the purpose. If we teach methods and principles if we look at the content and classification, they are as follows explained:

"Creating knowledge and skills from students that already exist to understand the essence of the experience of qualification" The principle and method of the above-mentioned educational strategy is general education is a sum of components. "These components are common in teaching English strengthens the process of integration and, as a result, educational procedures develops step by step" . Every teacher in teaching English in determining the skill of the professional component in the organization of his training quality, structural strategic principle and sequence steps effectively increases its reproducibility, which is the same as the teacher's goals represents the goal of the step forward" . The student's scientific potential concretization and consistency of the goals and tasks of each principle

focused on providing, in which international and national cooperation strengthened the modern teaching strategies of professors and the principles of experience expands. is determined by the ability to correctly organize the principle of the method. Therefore, it is of good quality There are several principles in the organization of the lesson, which are in place to fully achieve the intended goal of teachers and students is considered There is no doubt that several methods will be used during training impossible, or at least using one method completely effectively is undoubtedly a complex process. Therefore, we cannot say which method is more complex or for useful teachers, on the contrary, we think so The most appropriate method and approach for training is the teacher's own based on the quality and structure of the lessons aspect of helping students and the effectiveness of the environment is an increasing goal. Diversity and flexibility in classroom settings is a meaningful feature. Modern pedagogical technologies in teaching English, organization of interactive classes of strategies, methods and principles is considered a criterion and the potential of interest develops sufficiently, as a result cooperation methods, positive characteristics of individual potential, respectively will be perfected. "Each method or method is a lesson chosen by the teacher - not only increasing the effectiveness of the training, but also the student

CONCLUSION

In conclusion: the teacher uses a logical attack during the lesson to interest students in the language, i.e. deductive and inductive learning areas, developing the student's internal and external knowledge skills, and the student's creative thinking, learning and analysis methods. direct and not boring the student, but be able to enter each lesson with his own style. Modern pedagogical technologies should be able to give the teaching technique in accordance with the student's worldview and be able to use his own style.
