The intensity of today's times is showing that our lives cannot be imagined at all without the Internet or social networks. Most people's activities are related to being aware of the Daily News that is happening in the world through the Internet, social networks and Telegram channels, transmitting them to each other.	Internet, social media, internet system, computer technology.

Introduction

Information about the changes, events, news that are taking place on the scale of our country and the world is reflected in all social networks. While keeping up with this news, it is much more convenient to use the Internet system, mobile phones and computer technology. In addition, social networks are a very convenient tool for exchanging information or reacting to an event, expressing one's opinion or communicating among themselves.

All this indicates that it is an unparalleled opportunity for users of social networks to express their thoughts, views and feelings. That is why social networks make a person of any age "charming" to himself on a bemisl level.

Most young people waste their precious time using social media all day long. Thus, they receive almost all information and react to one issue or another, depending on their worldview. However, it cannot be said that all the reported relationships are the opinion of people with level, that is, spirituality, of course. Especially those who do not have enough knowledge and skills today, without thinking about whether they are right or wrong, express their opinion on any information distributed on social networks or whether they have knowledge and potential for certain issues. Or their own "works" either "article", "message", "poem" are posted on social networks and praise each other by raising them to the Blue.

It is interesting that some people do not even go to the workshop, whether it is actually necessary to do this. Galiz sentences that "decorate" the information referenced on social networks, as well as spelling errors, indicate to what extent the level of the user of that network is. This also causes states of regret, pity in social network users. And sometimes even the enumeration of unreasonable and levelless information that is being referenced through social networks cannot be reached.

In particular, such groups have also appeared on networks that it is becoming commonplace for users to cheer each other up, as well as chaperone someone's name in the mud. Gossip has become commonplace for them. Some people, on the other hand, try to discredit people who do not like them from the social network, hit the ground, take advantage of the opportunity they have for this. Since there is no opportunity to take control of social networks, it is thought that any work can be done on it. Those who say that the opportunity to think freely can be used in such ways, reveal in such ways to

a large audience to what extent their level is. This is why many people don't like these networks. But even so, looking at statistics, 96% of the world's young people are engaging in interaction through social media.

Today, a huge amount of information is being covered on social networks, which serves to promote the reforms carried out in our country, the Universal achievements of our state in the world media space and to raise human spirituality in every possible way. At the same time, the threat of threats and other vices in the mask of "mass culture" continues to pose a threat to our national mentality, which is the harbinger of various agendas, Gossip, national cultures.

An aspect that dulls one's interpretation, under the guise of "mass culture" through social networks, corrupt ideas, dirt, inhuman habits are entering our country. The history of the nation, the ideological struggles that reject its past values, encouraging the promotion of "mass culture", are all carried out precisely through social networks. After all, it is not a secret for anyone that social networks are one of the main supports of ideologists who give into the whirlwind. Consequently, this situation requires regular awareness of threats from each of us.

The mercenary forces, trying to exert pressure on the human mind, soul and psyche, are effectively using the Internet system and social networks as the most influential tools in the implementation of information attacks. At the moment, the perception by young people of foreign ideas and information attacks on our national morale, which are distributed through the Internet and social networks, and its consequences are of concern to a person.

It should be noted that "popular culture" does not choose language, religion, faith, race, Space, people and nation according to the characteristics of manifestation. It violates the principles of humanism in social relations by encouraging the cultural and aesthetic values of society. After all, in the use of social networks, of course, we should all have information about media security, about the types of ideological struggle that Western countries are conducting, and teach this to young people.

Situations such as ideological, ideological interaction, dissemination of dysinformational information, in order to change the human mind and worldview through social networks, especially require vigilance. In an information attack, the human mind, the psyche of the nation are targeted. In fact, in the implementation of information attacks, first of all, the idea of ideological influence through the conquest of the human mind and soul lies. This situation resists the stability of states and threatens the historically formed values of the nation, its identity, its survival as a nation and a people. Timely awareness of the influence of evil and destructive ideas, which are manifested as ideological and ideological threats through social networks, constant awareness of them, is an urgent task of today, which every compatriot, first of all, representatives of the younger generation, will have to deeply understand.

In conclusion, as the head of our state Shavkat Mirziyoev noted, "... we cannot carelessly look at the formation of our children not on the basis of our world and national literature, whose consciousness, worldview has been tested for centuries, which is a treasure of high spirituality, but on the basis of some kind of dubious, harmful information." Consequently, today's period demands that we do not allow any of the various negative situations on social networks that we seek to deceive and infuse our young people with their own prejudices by spreading slander and fabrications around the world. After all, by preserving our national spirituality, it is our main task to raise our youth in the spirit of loyalty to the motherland and increase their love for their people, for their country.
