The article discusses independent education and its significance, aspects of the organization of independent education. Many aspects of independent learning and their positive impact on the level and quality of education are discussed.	Extensive, orientation, compensatory, thinking, mind, reflection reaction, response reaction.

### Introduction

In the organization of the modern educational process, the main attention is paid to the direction of independent education.

Before starting to present the next question, I would like to point out that what Henry Ford said: "If I want to destroy my competitors, then I'll give them more narrow specialists." This paradox let's explain for narrow specialist Not capable creatively wide think, because the deprived extensive knowledge various regions knowledge, general cultural outlook.

Need V wide educated specialists especially necessary For construction production. By this reason general education preparation future technical engineers given huge meaning. Students study enough big number of disciplines that form educational technical level: mathematics, chemistry, physics, technology metals, descriptive geometry, mechanical engineering drawing, theoretical mechanics, strength of materials, theory of mechanisms and machines, machine parts, metrology, hydraulics, electrical engineering, heating engineering And row others.

If at least about 10% of each discipline was consciously mastered students, then these would be well-trained specialists. But in reality painting very disappointing, For example, students third course during surveys and interviews can't answer questions from average schools, Not understand values well-known terms: coefficient of friction, efficiency, power, work, force, moment of inertia of mass body, moment of inertia of the body section, etc. Residual practical knowledge No, And graduate University It has, To unfortunately, short level knowledge.

Therefore, after graduating from university, young engineers have to learn again and practice **self-education**. Self-education is multidimensional, multi-line development personality. Self-education necessary study with student years, Here scroll main components:

- **extensive** – accumulation, acquisition new knowledge;
- **orientation** – definition myself And his places V society;
- **compensatory** – overcoming shortcomings school And university training, liquidation "white spots",

mechanical knowledge;

- **self-development** – improvement his consciousness, memory, thinking, creative qualities;
- **methodological** – overcoming professional narrowness;
- **communicative** – establishment connections between sciences, professions, estates;
- **co-creative** – accompaniment, assistance creative work, indispensable addition to it;
- **rejuvenation** – overcoming the inertia of one's own thinking, To live fully and develop, you need to move from time to time from provisions student on position student;
- **psychological** – preservation completeness being, feelings involvement in intellectual movement;
- **gerontological** - maintaining connections With peace And through them- viability body.

Self-education There is creative Job By development his personalities, expansion erudition, deepening worldview. It is important component creative and transformative, spiritual activities person, transformations reproductive activities V productive.

Self-education is the way to develop both intellect and personality in in general.

Self-education – necessary, constantly term life cultured, enlightened person, which should accompany him Always. That's why important already With youth years call at myself wish improve oneself, This accessible to everyone.

Special value self-education- V independent search engine thinking, V free assimilation free chosen one region knowledge.

Students are at an age when they begin to think O future, O volume, Who is ideal, imitating to whom Can define immediate For myself goals And tasks self-education And self-education.

Constantly improve oneself – Means occupy active position in everyone, in good faith And vigorously decide let small, But specific task in its place. It is important to remember that labor only then gives the greatest satisfaction when it is not only and not so much source material well-being, A will become such need, satisfaction which delivers greatest pleasure. IN period learning, the student's work is the comprehension of academic disciplines and this work Same must bring joy and satisfaction.
